

IN THE CLAIMS:

Claims 1-8 (Cancelled)

9. (Currently amended) A microcapsule composition comprising;
a plurality of microcapsules; and
an aqueous medium,
wherein each of the plurality of the microcapsules include a shell and a dispersion that
is encapsulated in the shell, and the dispersion includes a solvent and electrophoretic fine
particles that are dispersed in the solvent,
the plurality of microcapsules being present in an amount of 30 to 80% by weight in
the microcapsule composition, and the plurality of microcapsules having a volume-average
particle diameter of 30 to 150 μm , and not less than 80% by volume of the plurality of
microcapsules being present within the particle diameter range of $\pm 40\%$ of the maximum-
peak particle diameter around the maximum-peak particle diameter, wherein the total content
of the microcapsules and the aqueous medium in the microcapsule composition is not less
than 90% by weight and where the microcapsule composition is in the absence of a binder.

Claim 10 (Cancelled)

11. (Previously presented) The microcapsule composition according to claim 9,
wherein the thickness of the shell of the microcapsules is within a range of 0.1 to 5 μm .

12. (Previously presented) The microcapsule composition according to claim 9,
wherein said microcapsules are produced by a process without drying the microcapsules.

13. (Previously presented) The microcapsule composition according to claim 9, wherein said microcapsules are produced by a process that includes a wet classification step.

14. (Previously presented) The microcapsule composition according to claim 9, wherein said microcapsules are present in an amount effective to produce an electrophoretic display.
